# SHUTTLE STORAGE AUTOMATION PROMOTES PRODUCTIVITY

Productivity is a crucial factor in determining the performance of your business.

Enhancing the productivity of your business results in:

Reducing operating costs

Improving customer acquisitions

Creating industry leadership

Increasing profitability

Inefficiencies like poor flow of materials, poor space utilization, disorganized storage, and manual inventory management can quickly add up—and end up costing you customers and thousands of dollars in lost profit.

### JUST THE FACTS - BENEFITS OF SHUTTLE STORAGE AUTOMATION

Picking Efficiency: Cuts pick times by 1/3 or more

Picking Accuracy: 99.9% picking accuracy

Inventory Control: Eliminates stock-outs and overstocking

Space Savings: Uses up to 199% less floor space

**Safety & Ergonomics:** Eliminates bending, climbing and lifting that causes worker's compensation claims

Security: Totally secured system eliminates pilferage and lost inventory

### A CLOSER LOOK SHUTTLE STORAGE AUTOMATION VS. TRADITIONAL SHELVING

### **ICKING EFFICIENC**

Vertical storage Shuttles eliminate wasted walk and search time by bring rig requested items directly to the operator with push button technology.

With full tray extraction, the tray s automatically presented for easy bading unloading and handling of heavy and bulky goods,

Employees are able to pick the right part in a fraction of the hime as with manual picking with the help of ght directed picking, as well as automated batch picking and kitting.

Dual tray del very ersures that while Items are stored and removed from the first tray, the next tray is already being retrieved and iskept in position to decrease wait time between olcks even further.

### PICKING ACCURACY

- The Shuttle can increase accuracy up to 99.9% by bringing the specified bins to the operator using infrared light-directed technology that shows exactly which part to pick from shelves.
  - This allows operators to spend less time on picking and reduces the risk of operators picking the wrong part.

- More accurate picking means that fewer people are required for picking and putting operations, allowing you to reallocate them to other revenue-producing activities.
- Accurate, quick, and efficient order fulfillment increases customer trust. satisfaction, and retention.

### SAFETY/ERGONOMICS

Workers frequently reach, bend, lift, wist, or use other unnatural body motions that can cause in the when remembers the terms from shelves

In a Shutte, inventory is stored vertically and automatically brought down to an ergonomically placed, waist-high work counter so employees can has by see and access everything on the shell.

Workers risk falling off ladders when d mixing to reach parts and when walking through warehouses throughout the day searching for parts

Operators don't need to walk anywhere to rear eve parts, since they're brought directly to the point of use.

### SPACE EFFICIENCY

- Shelves need enough space for aisles for employees to walk through, require air space above bins for reaching, and are difficult to store parts efficiently in.
- In a Shuttle, inventory is stored in —
  one centralized location to
  consolidate storage and save space.
- Inventory height is scanned and automatically stored in the least amount of space required with integrated CubeStar® technology.
- Reworking storage on shelves is also difficult when new inventory comes in. Small, medium, and large parts are often stored in different areas, requiring extra walking and searching.
- Its vertical design converts overhead wasted air space into dynamic storage space.
- Vertical storage space savings combined with efficient automatic storage of inventory can provide 72% more storage capacity in 80% less space than traditional static storage.

### SECURITY

It is difficult to mack items with manual inventory and a lack of accountability makes it easy for items to be pilifered or go missing.

Automated Inventory tracking technology in a Shuttle allows you to view who accessed which items, and controlled access to specific trays ensures that only authorized personnel are able to access them.

- Items stored on shelves also quickly become dusty, which can damage sensitive parts, lead employees to spend extra time cleaning them, or ead to customers receiving dirty, dusty items with their order.
- A self-monitoring safety light barrier monitors the unit access area.

Automatic shutter doors protect the poperator and stored goods from being injured or damaged by moving parts.

The enclosed design of the Shuttle protects inventory from being damaged or degraded by dust or other environmental factors such as humidity and moisture.

### **INVENTORY CONTROL**

With shelving, inventory is done manually, which is prone to errors.

- It's difficult to determine when an item will be out of stock, which leads to companies rushing to obtain inventory after a stock-out.
- Increased inventory visibility makes it easy to quickly view what inventory is in stock and what's running low at any time.

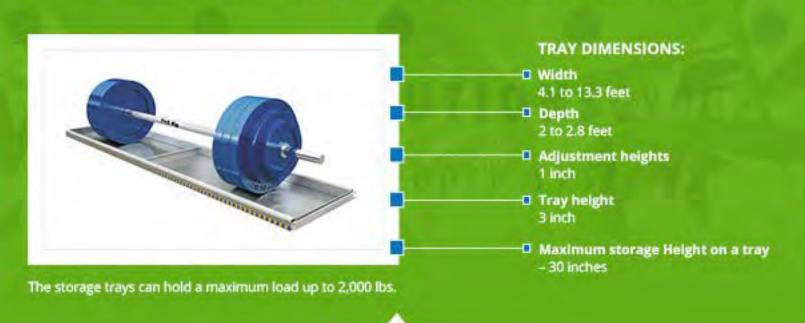

Automated inventory management continuously monitors stock levels, provides real-time inventory data, and sends alerts or can even automatically order new parts to avoid overstocks and stock-outs.

### PARTS SEGREGATION

## WHAT SIZES DO THE SHUTTLES COME IN?

Each KardexRemstar® Shuttle XP can be tailored to optimize your facility's cubic space.

SOUTHWEST**SOLUTIONS**GROUP

Heights from 8.4 to 98.6 feet

### INTEGRATED INVENTORY MANAGEMENT SOFTWARE

The Shut: es can be installed as a standa one solution with integrated batch picking. For even more inventory control and visibility the Shuttles can also integrate with your existing ERP or WMS KardexRemstar offers wide portfolio of software packages:

### Smartpick 5200

Designed for inventory management in the electronics industry

### Smartpick 6000

Supports efficient order picking with high diroughave

### Cleverstore 1000

Designed for efficient storage and retrieva of materials

#### Enhance Your Accuracy

From the standard validation via barcode, handheld RFID, or weight control to a wide range of optical user griddance such as Pick-to-Light, Put-to-Light, or LED Pointer, Power Pick Global Inventor y Management Software assists the user to work with greater accuracy.

### Achieve Greater Efficiency

Integrating Power Pick Global into your processes allows batch order picking. Picking multipleorders at one time increases diroughput algorificantly.

### When Security Matters

Through Power Pick Global, user rights and group rights can be controlled and managed by supervisors Each transaction is monitored and macked to provide real time inventory data.

### Wide Range of Software Solutions

From an easy "Plug and Play" and middleware to customized solutions, all Power Pick Global software solutions are based on the latest Windows & technology, which can interface with the majority of tier one and tier two WM5 and ERP providers.

From the smallest store to a complex distribution centre, Power Pick Global can be perfectly tailored to your requirements – with future security inchrided in the package. This is because we carry out continuous development and expansion of the Fast PicS inventory management solutions.

### UNIQUE SHUTTLE APPLICATIONS

KardexRemstar Shuttle XP offers even greater flexibility thanks to various options available. It can be resized, moved, and altered to meet changing business and facility requirements. The system can be installed almost anywhere and can connect through several floors or work areas for multi-level access.

Installation Outside The Building
To increase the existing facility capacity, a
shuttle can be installed outside the building
and walled in with pass-through access.

Multiple access ports

Access ports can be installed vertically
through several floors or on both sides of
the unit.

Manual / Automatic Tray Extraction
Using full tray extraction, the tray is
automatically pushed out onto an
extraction table mounted to the front of
the Shuttle, allowing easy loading,
unloading, and handling of heavy and
bulky goods.

Dual Tray Access
A dual tray delivery option makes it
possible to use two work levels in the
access opening. While items are stored or
removed from the first tray, the next tray
is being retrieved and kept in a waiting
position, decreasing wait time even
further.

Unique applications
The Shuttles can be adapted with
refrigeration, Halon, and positive or
negative air flow.
