

# Plant Storage Made Easy

Shown above is the Overhead Plant Lift, model LP-1001 which is eight feet long.

## Why does overhead plant storage make sense?

1. Plant storage takes up a big footprint and gobbles up space quickly.
  2. Restocking and keeping a larger variety on hand is easier.
  3. Watering is easier because the plants are brought right to the right height and there is an optional drip pan available.
  4. Every time plants are moved they can get dropped or damaged.
  5. High plants are easy to get to now, no more climbing or dropping things.
  6. Every month you are paying for open air space that could be used for optimal storage. Your empty overhead space suddenly becomes very valuable.
- The Overhead Plant Lift is a modular design. Each section is eight feet long so it is easy for you to optimize your space.
  - All Overhead Plant Lifts do the same thing, they go up and down. They are simple, reliable and strong.
  - Because the plant lift is an 'electric appliance' not a 'building improvement', you will enjoy a nice tax break.
  - Every Overhead Plant Lift is made with pride in the United States of America.
  - Your satisfaction is guaranteed. With more than 3,300 successful installations over the last 20 years, Overhead Lifts have become the gold standard and we stand behind our lifts.

## Why would you consider the Overhead Plant Lift?

1. Restocking the sales floor is quick and easy.
2. Open your regular shelving for high turnover items.
3. Maintaining accurate inventory is fast and easy because you can see what you have.
4. Plants are brought to the customers finger tips in moments with a push of a button.
