

BETTER STORAGE. BETTER CARE.
BUILT RIGHT IN.

CoreSTOR™ patient server is designed to put 80% of the most frequently used supplies for patient care 10 steps from the bedside.

This lets you:

- Build a decentralized nurse station right into each patient's room – equipping nurses to spend less time “hunting and gathering” and more time caring for patients.
- Reduce traffic through the patient room by stocking supplies from outside the room – minimizing patient exposure and interruptions.
- Optimize floor plan and patient-room design, yielding more usable space – maximizing cost-per-square foot.
